1	Introduction	1
1.1	Motivation of the Work	2
1.2	Problem Statement	4
1.2.1	Hypotheses	5
1.3	An Engineering Approach to Nature-Inspired Routing Protocols ...	6
1.4	The Scientific Contributions of the Work	7
1.4.1	A Simple, Distributed, Decentralized Multi-Agent System ..	8
1.4.2	A Comprehensive Routing System	9
1.4.3	An Empirical Comprehensive Performance Evaluation Framework	9
1.4.4	A Scalability Framework for (Nature-Inspired) Agent-Based Routing Protocols	9
1.4.5	Protocol Engineering of Nature-Inspired Routing Protocols .	9
1.4.6	A Nature-Inspired Linux Router	10
1.4.7	The Protocol Validation Framework	10
1.4.8	The Formal Framework for Nature-Inspired Protocols	10
1.4.9	A Simple, Efficient, and Scalable Nature-Inspired Security Framework	10
1.4.10	Emerging Mobile and Wireless Sensors Ad Hoc Networks ..	11
1.5	Organization of the Book	11
2	A Comprehensive Survey of Nature-Inspired Routing Protocols	19
2.1	Introduction	19
2.1.1	Organization of the Chapter	20
2.2	Network Routing Algorithms	20
2.2.1	Features Landscape of a Modern Routing Algorithm	21
2.2.2	Taxonomy of Routing Algorithms	22
2.3	Ant Colony Optimization (ACO) Routing Algorithms for Fixed Networks	26
2.3.1	Important Elements of ACO in Routing	26
2.3.2	Ant-Based Control (ABC) for Circuit-Switched Networks ..	28

- 2.3.3 Ant-Based Control (ABC) for Packet-Switched Networks . . . 30
- 2.3.4 AntNet 31
- 2.3.5 Ant Colony Routing (ACR) and AntNet+SELA QoS-Aware Routing 33
- 2.3.6 A Brief History of Research in AntNet 34
- 2.4 Evolutionary Routing Algorithms for Fixed Networks 37
 - 2.4.1 Important Elements of EA in Routing 38
 - 2.4.2 GARA 39
 - 2.4.3 ASGA and SynthECA 41
 - 2.4.4 DGA 43
- 2.5 Related Work on Routing Algorithms for Fixed Networks 44
 - 2.5.1 Artificial Intelligence Community 45
 - 2.5.2 Networking Community 46
- 2.6 Summary 52

3 From *The Wisdom of the Hive* to Routing in Telecommunication

- Networks** 53
 - 3.1 Introduction 53
 - 3.1.1 Organization of the Chapter 54
 - 3.2 An Agent-Based Investigation of a Honeybee Colony 55
 - 3.2.1 Labor Management 55
 - 3.2.2 The Communication Network of a Honeybee Colony 55
 - 3.2.3 Reinforcement Learning 56
 - 3.2.4 Distributed Coordination and Planning 56
 - 3.2.5 Energy-Efficient Foraging 56
 - 3.2.6 Stochastic Selection of Flower Sites 56
 - 3.2.7 Group Organization 57
 - 3.3 BeeHive: The Mapping of Concepts from Nature to Networks 57
 - 3.4 The *Bee Agent* Model 58
 - 3.4.1 Estimation Model of Agents 62
 - 3.4.2 Goodness of a Neighbor 62
 - 3.4.3 Communication Paradigm of Agents 65
 - 3.4.4 Packet-Switching Algorithm 65
 - 3.5 BeeHive Algorithm 66
 - 3.6 The Performance Evaluation Framework for Nature-Inspired Routing Algorithms 69
 - 3.7 Routing Algorithms Used for Comparison 73
 - 3.7.1 AntNet 73
 - 3.7.2 DGA 73
 - 3.7.3 OSPF 74
 - 3.7.4 Daemon 74
 - 3.8 Simulation Environment for BeeHive 75
 - 3.8.1 simpleNet 75
 - 3.8.2 NTTNet 76
 - 3.8.3 Node150 76

3.9	Discussion of the Results from the Experiments	76
3.9.1	Congestion Avoidance Behavior	76
3.9.2	Queue Management Behavior	91
3.9.3	Hot Spots	93
3.9.4	Router Crash Experiments	97
3.9.5	Bursty Traffic Generator	99
3.9.6	Sessionless Network Traffic	103
3.9.7	Size of Routing Table	106
3.10	Summary	107
4	A Scalability Framework for Nature-Inspired Routing Algorithms	109
4.1	Introduction	109
4.1.1	Existing Work on Scalability Analysis	110
4.1.2	Organization of the Chapter	113
4.2	The Scalability Model for a Routing Algorithm	114
4.2.1	Cost Model	114
4.2.2	Power Model of an Algorithm	115
4.2.3	Scalability Metric for a Routing Algorithm	117
4.3	Simulation Environment for Scalability Analysis	117
4.3.1	simpleNet	117
4.3.2	NTTNet	117
4.3.3	Node150	117
4.3.4	Node350	118
4.3.5	Node650	118
4.3.6	Node1050	118
4.4	Discussion of the Results from the Experiments	119
4.4.1	Throughput and Packet Delivery Ratio	120
4.4.2	Packet Delay	124
4.4.3	Control Overhead and Suboptimal Overhead	125
4.4.4	Agent and Packet Processing Complexity	128
4.4.5	Routing Table Size	131
4.4.6	Investigation of the Behavior of <i>AntNet</i>	131
4.5	Towards an Empirically Founded Scalability Model for Routing Protocols	134
4.5.1	Scalability Matrix and Scalability Analysis	139
4.5.2	Scalability Analysis of BeeHive	140
4.5.3	Scalability Analysis of AntNet	141
4.5.4	Scalability Analysis of OSPF	141
4.6	Summary	144
5	BeeHive in Real Networks of Linux Routers	147
5.1	Introduction	147
5.1.1	Organization of the Chapter	149
5.2	Engineering of Nature-Inspired Routing Protocols	149
5.2.1	Structural Design of a Routing Framework	149

- 5.2.2 Structural Semantics of the Network Stack 153
- 5.2.3 System Design Issues 154
- 5.3 Natural Routing Framework: Design and Implementation 155
 - 5.3.1 Algorithm-Independent Framework 156
 - 5.3.2 Algorithmic-Dependent BeeHive Module 157
- 5.4 Protocol Verification Framework 162
- 5.5 The Motivation Behind the Design and Structure of Experiments . . . 167
- 5.6 Discussion of the Results from the Experiments 167
 - 5.6.1 Quantum Traffic Engineering 167
 - 5.6.2 Real-World Applications Traffic Engineering 178
 - 5.6.3 Hybrid Traffic Engineering 181
- 5.7 Summary 184

- 6 A Formal Framework for Analyzing the Behavior of *BeeHive* 185**
 - 6.1 Introduction 185
 - 6.1.1 Organization of the Chapter 186
 - 6.2 Goodness 186
 - 6.3 Analytical Model 189
 - 6.3.1 Node Traffic 191
 - 6.3.2 Link Flows 192
 - 6.3.3 Calculation of Delays 192
 - 6.3.4 Throughput 194
 - 6.4 Empirical Verification of the Formal Model 194
 - 6.4.1 Example 1 194
 - 6.4.2 Example 2 197
 - 6.5 Summary 201

- 7 An Efficient Nature-Inspired Security Framework for *BeeHive* 205**
 - 7.1 Introduction 205
 - 7.1.1 Organization of the Chapter 206
 - 7.2 Robustness and Security Analysis of a Routing Protocol 206
 - 7.2.1 Security Threats to Nature-Inspired Routing Protocols 207
 - 7.2.2 Existing Works on Security of Routing Protocols 208
 - 7.3 BeeHiveGuard: A Digital Signature-Based Security Framework . . . 208
 - 7.3.1 Agent Integrity 209
 - 7.3.2 Routing Information Integrity 209
 - 7.3.3 Architecture of *BeeHiveGuard* 210
 - 7.4 BeeHiveAIS: an Immune-Inspired Security Framework for *BeeHive* 211
 - 7.4.1 Artificial Immune Systems (AISs) 211
 - 7.4.2 Behavioral Analysis of *BeeHive* for Designing an AIS 213
 - 7.4.3 The AIS Model of *BeeHiveAIS* 216
 - 7.4.4 Top-Level *BeeHiveAIS* 218
 - 7.5 Simulation Models of Our Security Frameworks 220
 - 7.5.1 Attack Scenarios on Simple Topologies 220

7.5.2	Analysis of Attacks and Effectiveness of Security Frameworks	221
7.5.3	NTTNet	225
7.5.4	Node150	230
7.6	Summary	233
8	Bee-Inspired Routing Protocols for Mobile Ad Hoc and Sensor Networks	235
8.1	Introduction	235
8.1.1	Existing Works on Nature-Inspired MANET Routing Protocols	236
8.1.2	Organization of the Chapter	237
8.2	Bee Agent Model	237
8.2.1	Packers	237
8.2.2	Scouts	237
8.2.3	Foragers	238
8.2.4	Beeswarm	238
8.3	Architecture of BeeAdHoc	238
8.3.1	Packing Floor	239
8.3.2	Entrance	239
8.3.3	Dance Floor	240
8.4	Simulation Framework	242
8.4.1	Metrics	243
8.4.2	Node Mobility Behavior	243
8.5	BeeAdHoc in Real-World MANETs	247
8.5.1	A Performance Evaluation Framework for Real MANETs in Linux	247
8.6	Results of Experiments	252
8.7	Security Threats in BeeAdHoc	257
8.8	Challenges for Routing Protocols in Ad Hoc Sensor Networks	258
8.8.1	Existing Works on Routing Protocols for Wireless Sensor Networks	258
8.9	BeeSensor: Architecture and Working	260
8.9.1	BeeSensor Agent's Model	260
8.9.2	Protocol Description	261
8.10	A Performance Evaluation Framework for Nature-Inspired Routing Protocols for WSNs	264
8.10.1	Metrics	265
8.11	Results	266
8.12	Summary	269
9	Conclusion and Future Work	271
9.1	Conclusion	271
9.2	Future Research	274
9.2.1	Quality of Service (QoS) Routing	274

9.2.2	Cyclic Paths	275
9.2.3	Intelligent and Knowledgeable Network Engineering	277
9.2.4	Bee Colony Metaheuristic	281
9.3	Natural Engineering: The Need for a Distinct Discipline	281
